Good introductory text

By Doug Erlandson

"Environmental Ethics" is a balanced and relatively complete introduction to an issue that is bound to be widely discussed in the years to come. After two introductory chapters, which discuss various approaches to moral decision making (such as utilitarian and deontological ethics), subsequent chapters include issues such as managing public lands, sustainability and responsibility to the future, anthropocentric and biocentric ethics and the inherent value of life, the land ethics, deep ecology, ecofeminism, and environmental justice and social equality.

Des Jardins, the author, writes in a lively fashion and does a creditable job of steering a middle course when discussing the many controversial issues that arise in environmental ethics. Even though this is not an anthology, Des Jardins describes in sufficient detail the ideas of various authors across the ideological spectrum (sometimes quoting them extensively) so as to provide an accurate portrayal of the various positions.
