With sets like EV3, NXT

By Amazon Customer

With sets like EV3, NXT, and Technic, you'll have ample opportunities to help your LEGO-loving child transition from simple kid sets to more complex robotic sets. And this is a good thing, especially if your child wants to be an engineering or scientist when they grow up. My son has thoroughly loved his advanced sets from LEGO Education, and he uses the parts every week. But even with all these Technic and robotic pieces at hand, a child can eventually run out of ideas for new things to build. What to do then?
